

Power: flows left to right. Supplies above, returns below. PROTOTYPE / UNVALIDATED.

01 Pack input / reverse protection / shunt

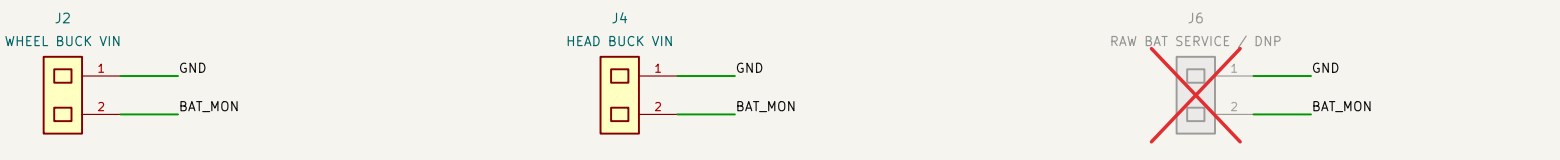

Q01 master stage provides BAT_IN, no charger on this PCB.

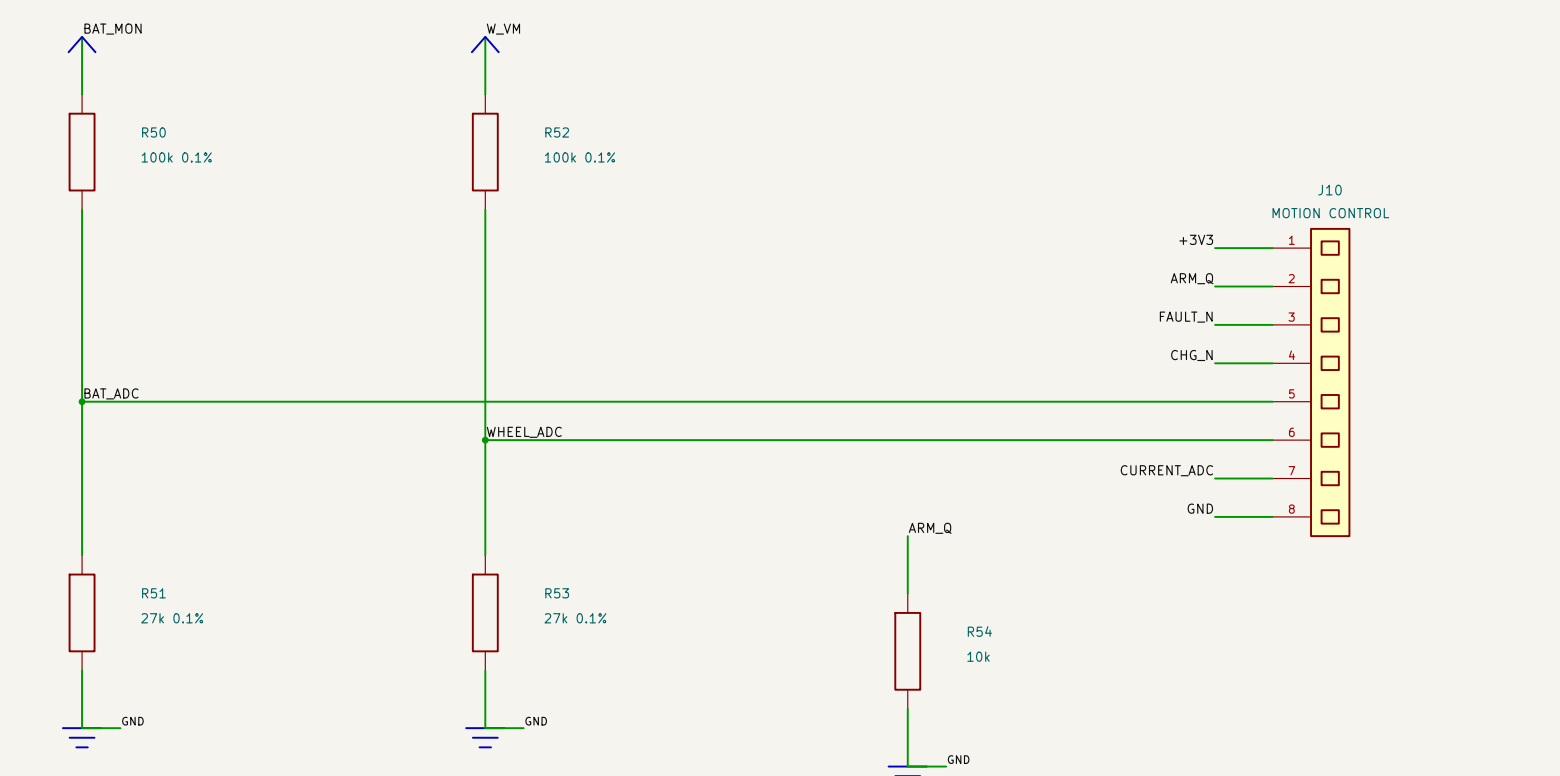

02 Kelvin current sense

05 External converter input distribution

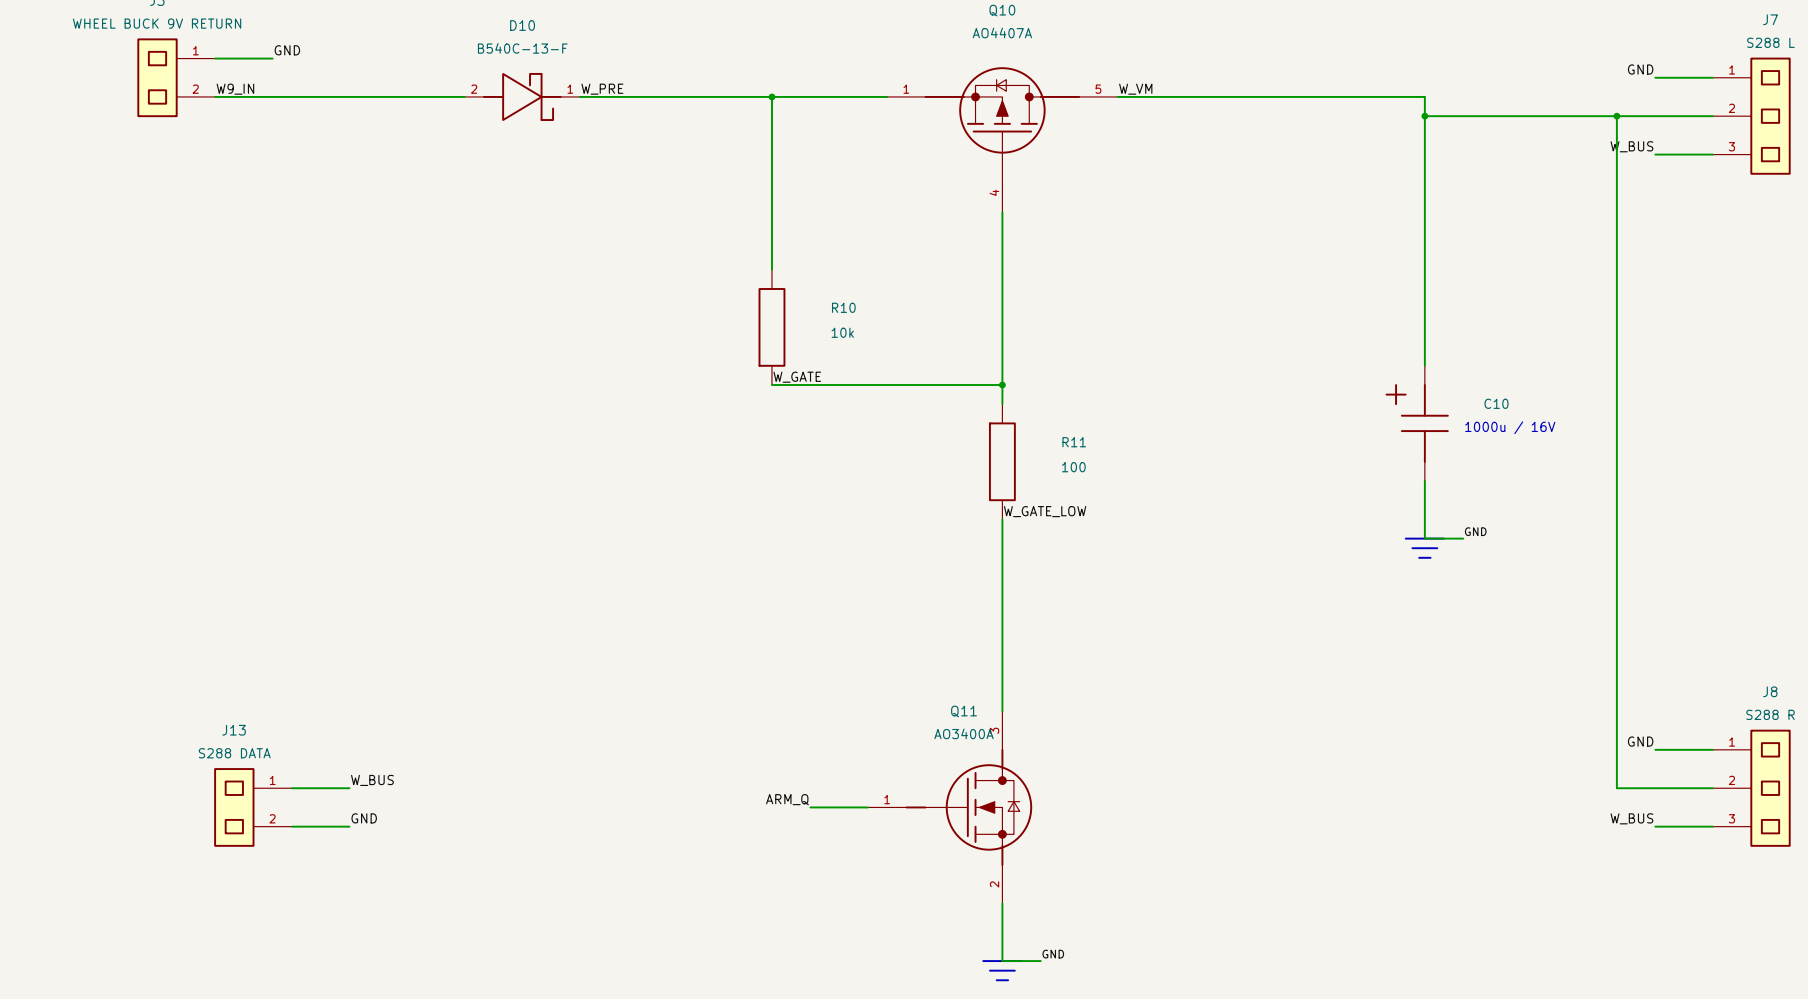

08 Voltage monitor / motion connector

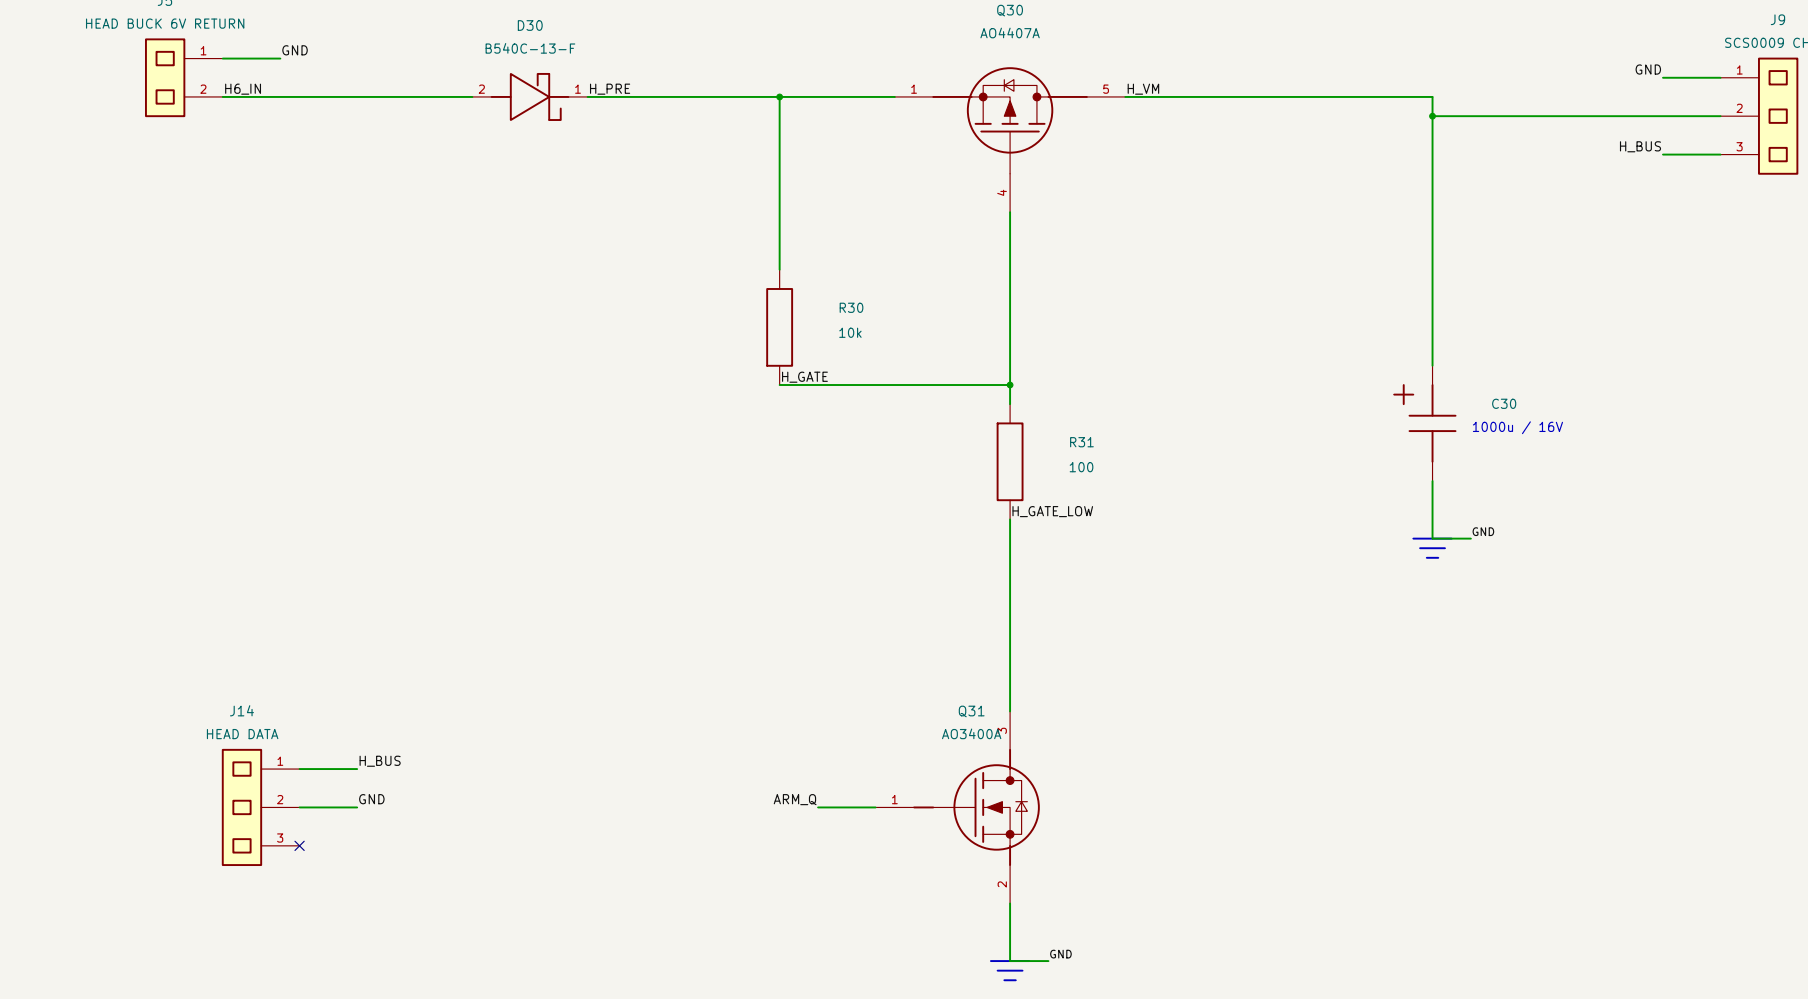

Divider ratio 27 / 121. Current_ADC comes from block 02.

03 Wheel 9 V conditioning

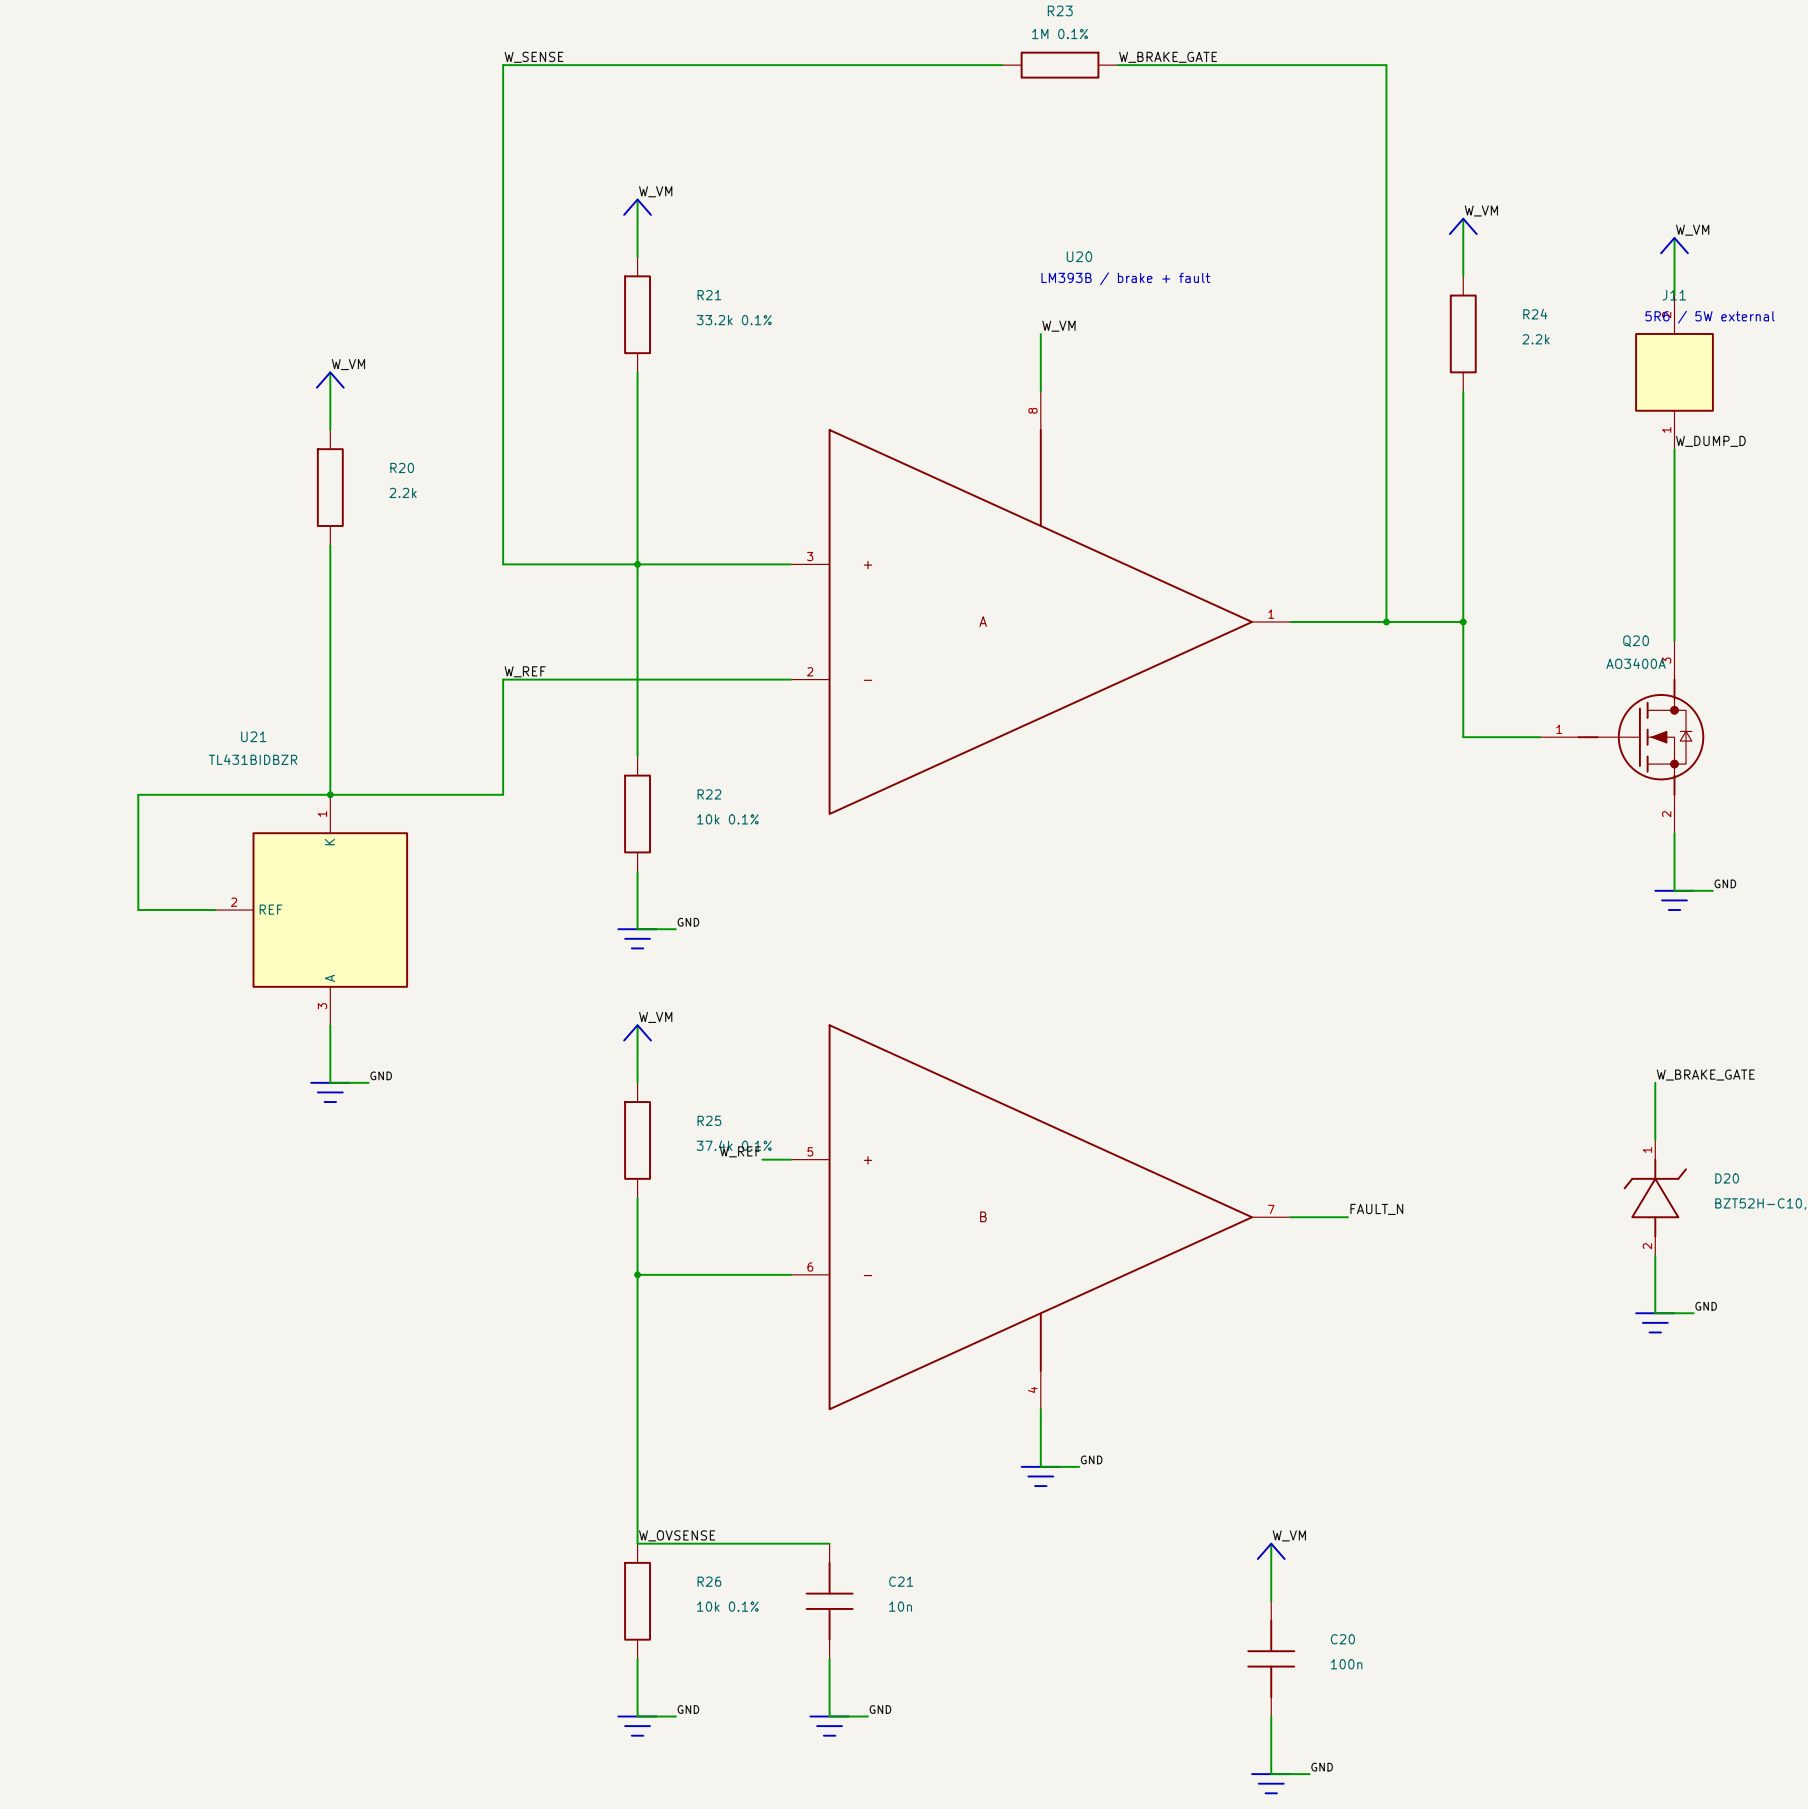

External back return, touch, brake energy and thermal performance: NOT_TESTED.

04 Head 6 V conditioning

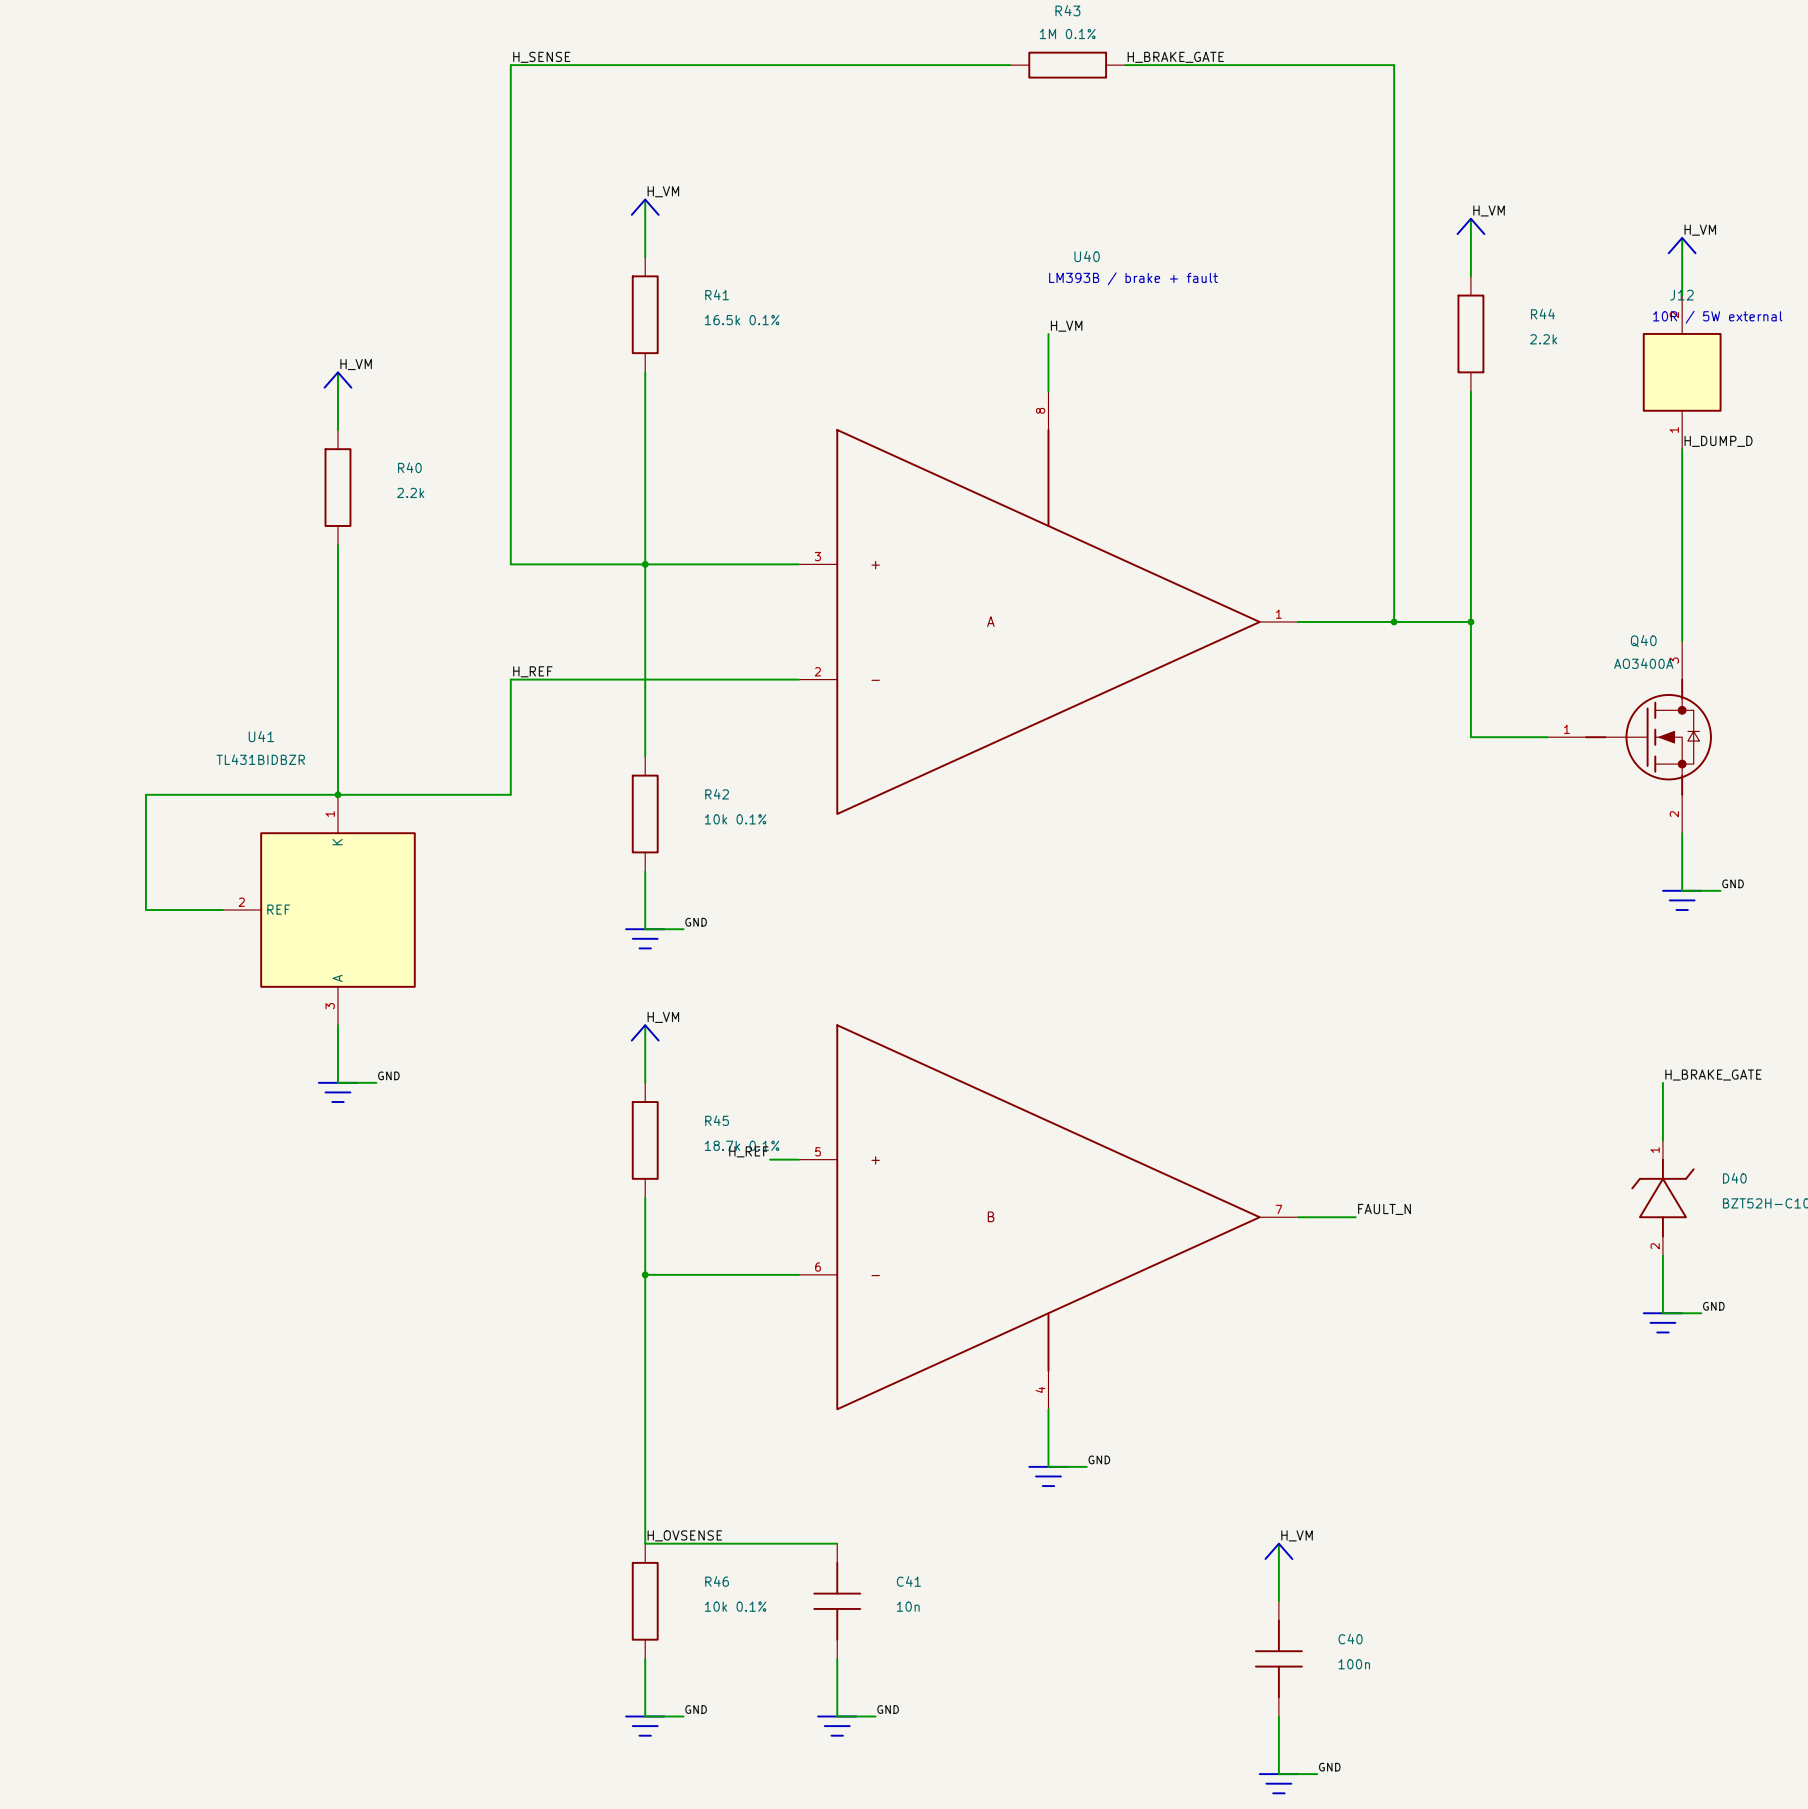

External back return, touch, brake energy and thermal performance: NOT_TESTED.

06 Wheel rail / brake and overvoltage

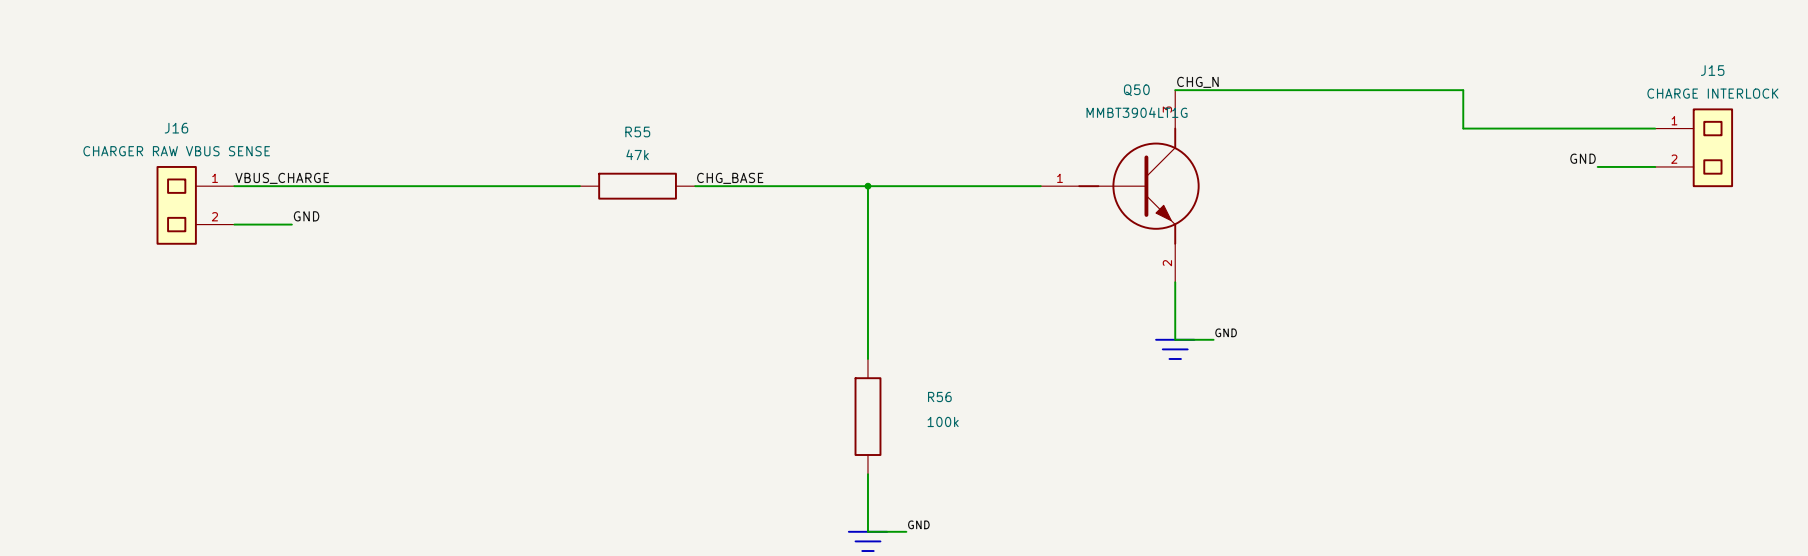

Two comparators share one J4000B. External dump resistor needs power qualification.

07 Head rail / brake and overvoltage

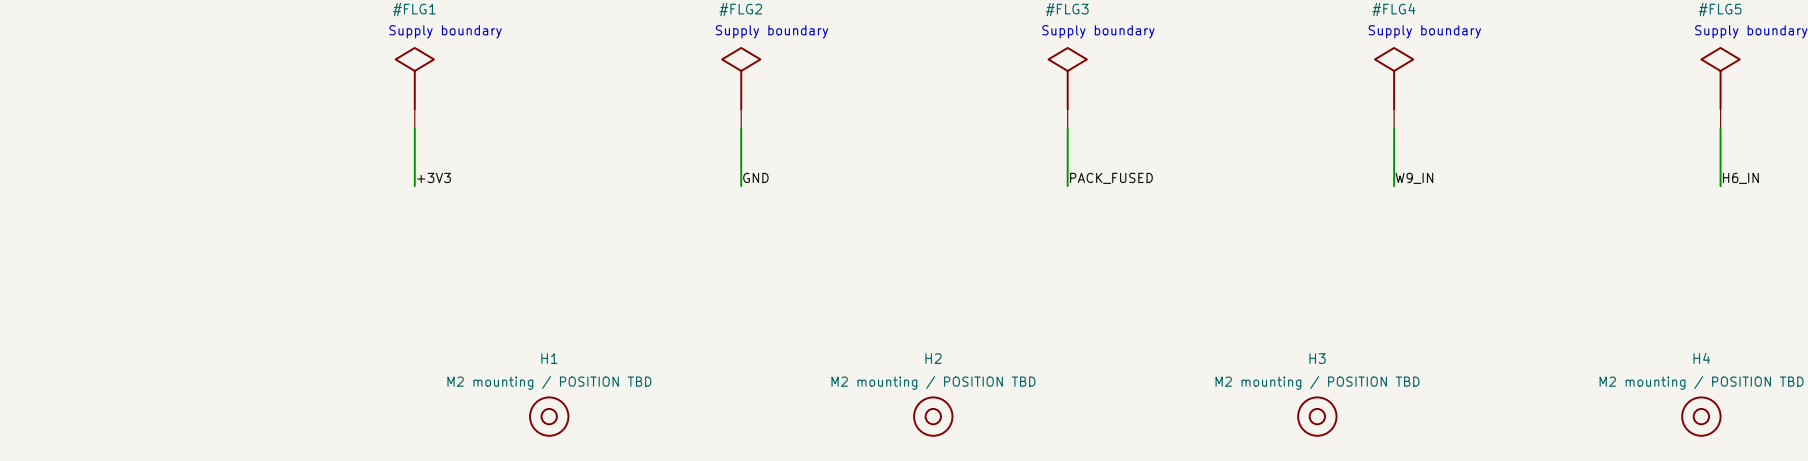

Two comparators share one J4000B. External dump resistor needs power qualification.

09 Charge insertion / VBUS sense

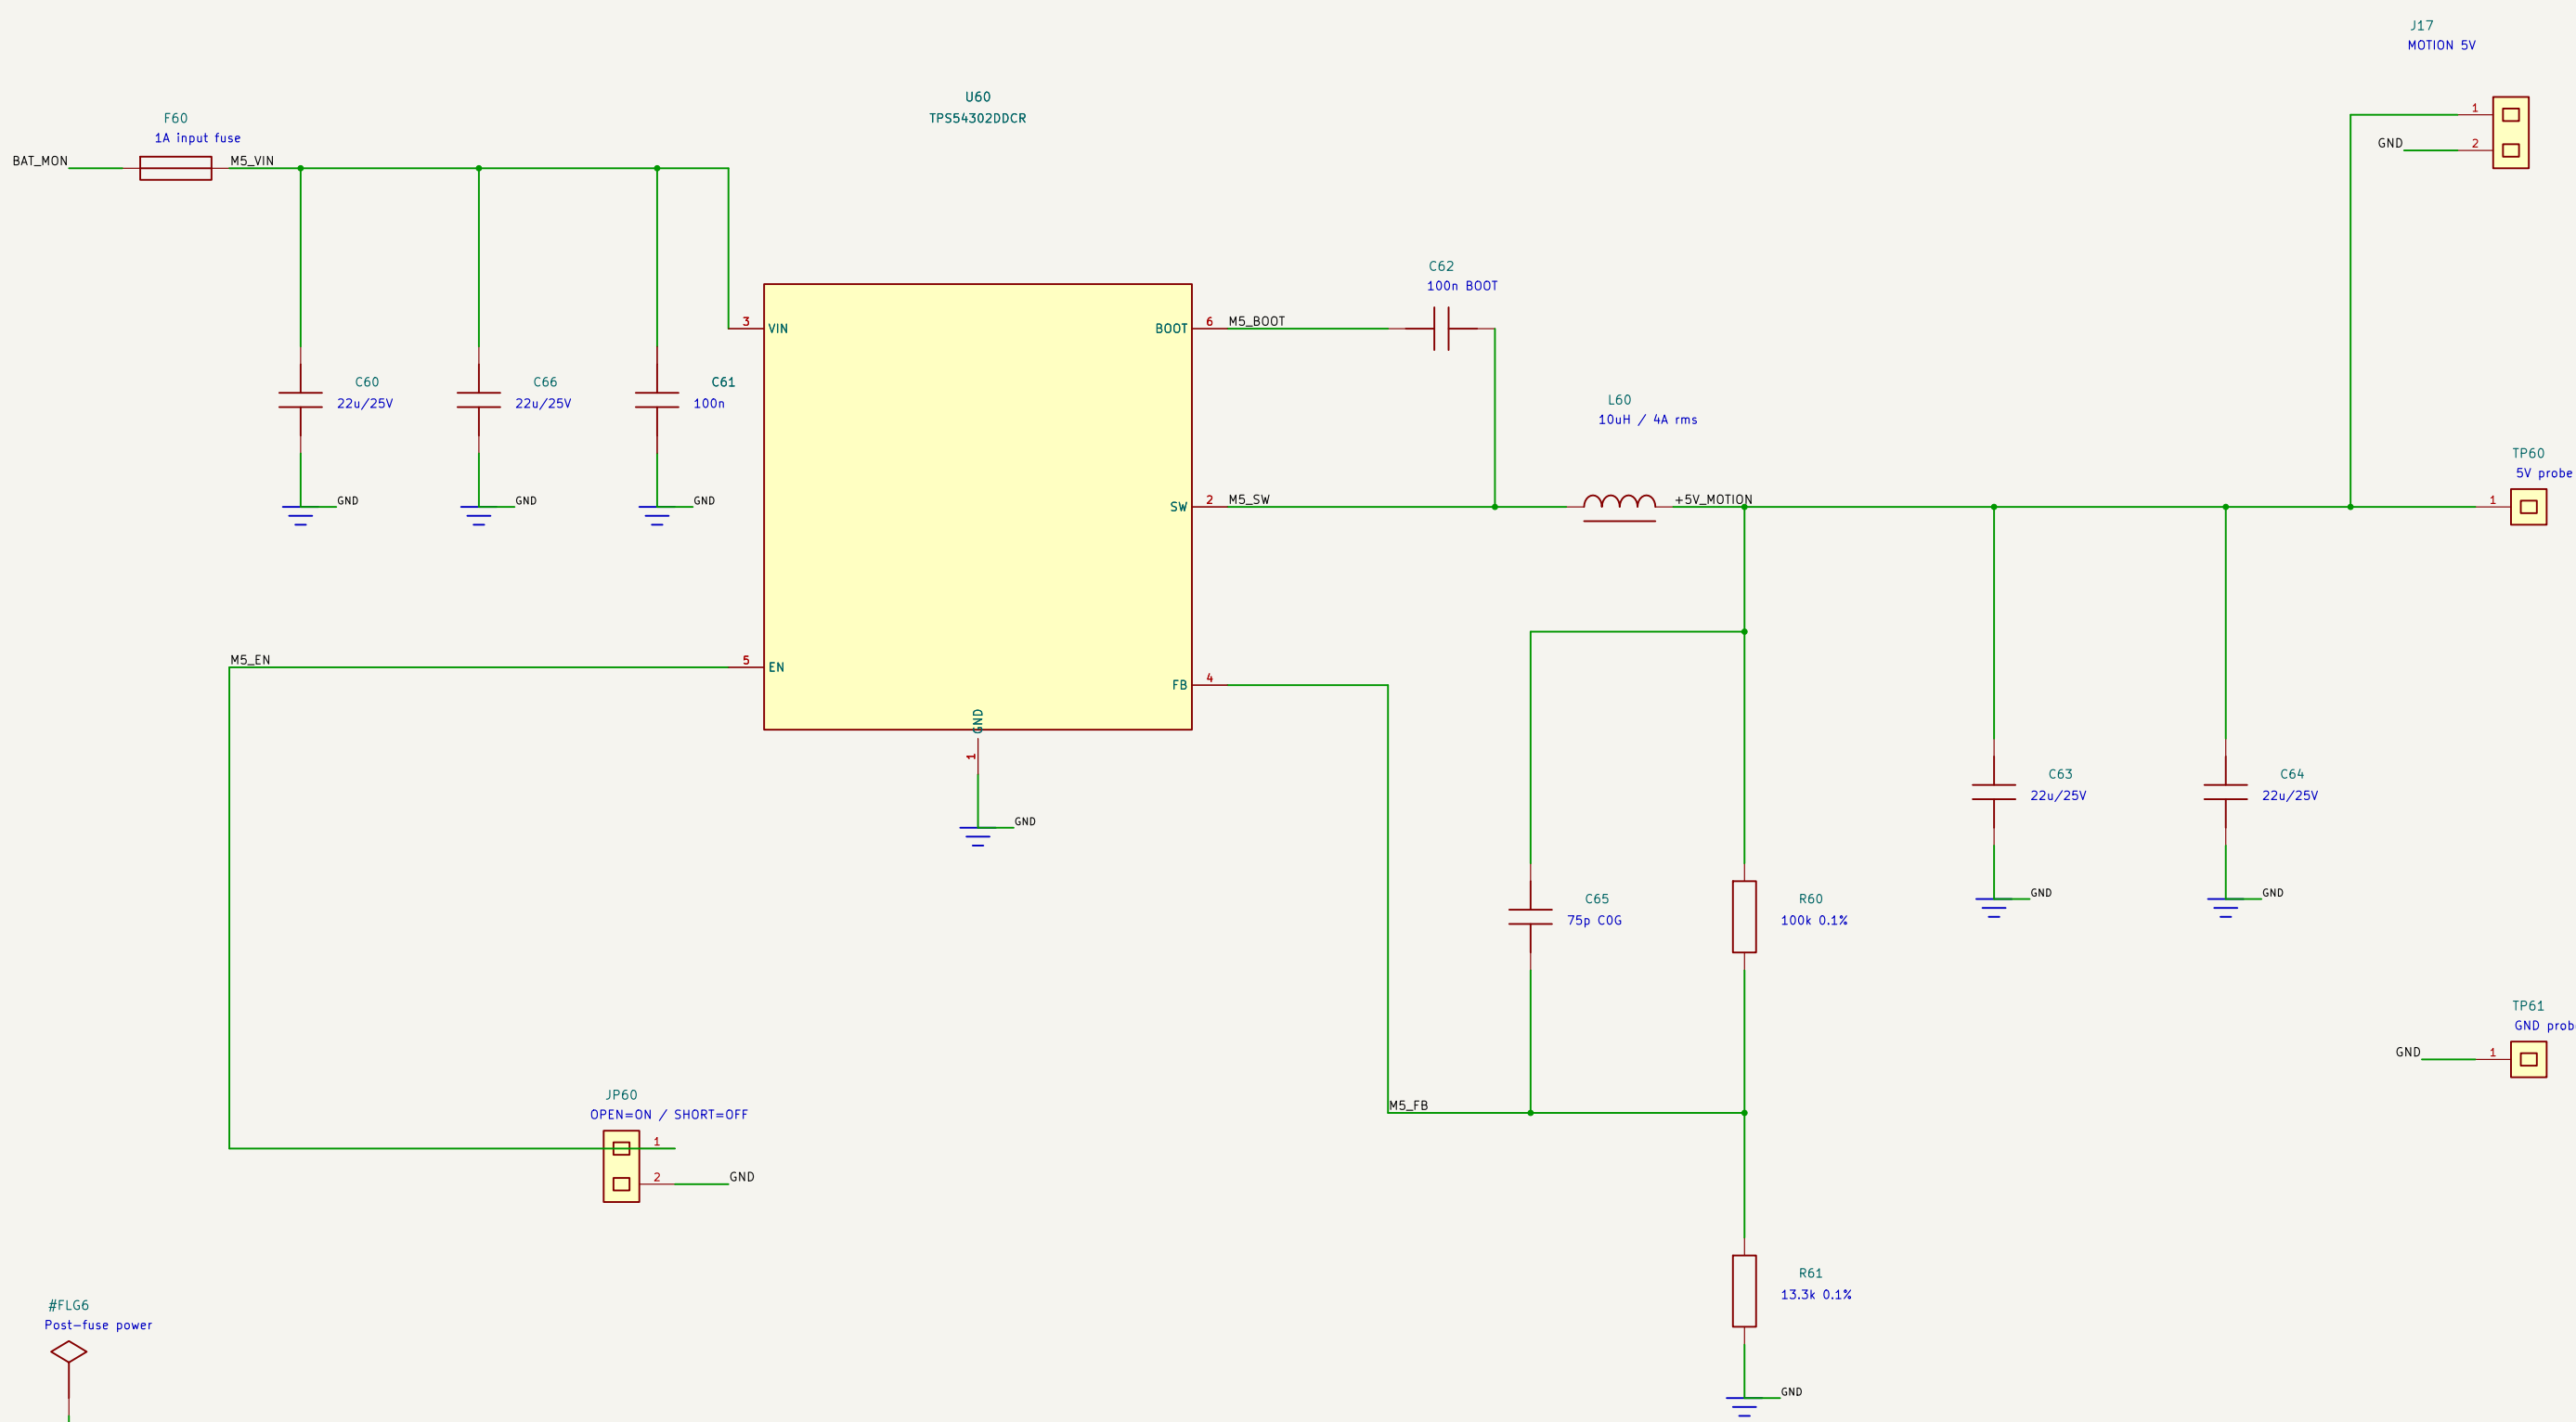

Sense and interlock only: vs CC / PS / PS / CC-CF charger implementation.

10 Supply boundaries / board mounting

80 + 45 mm PCBs populated assembly and thermal performance are not qualified.

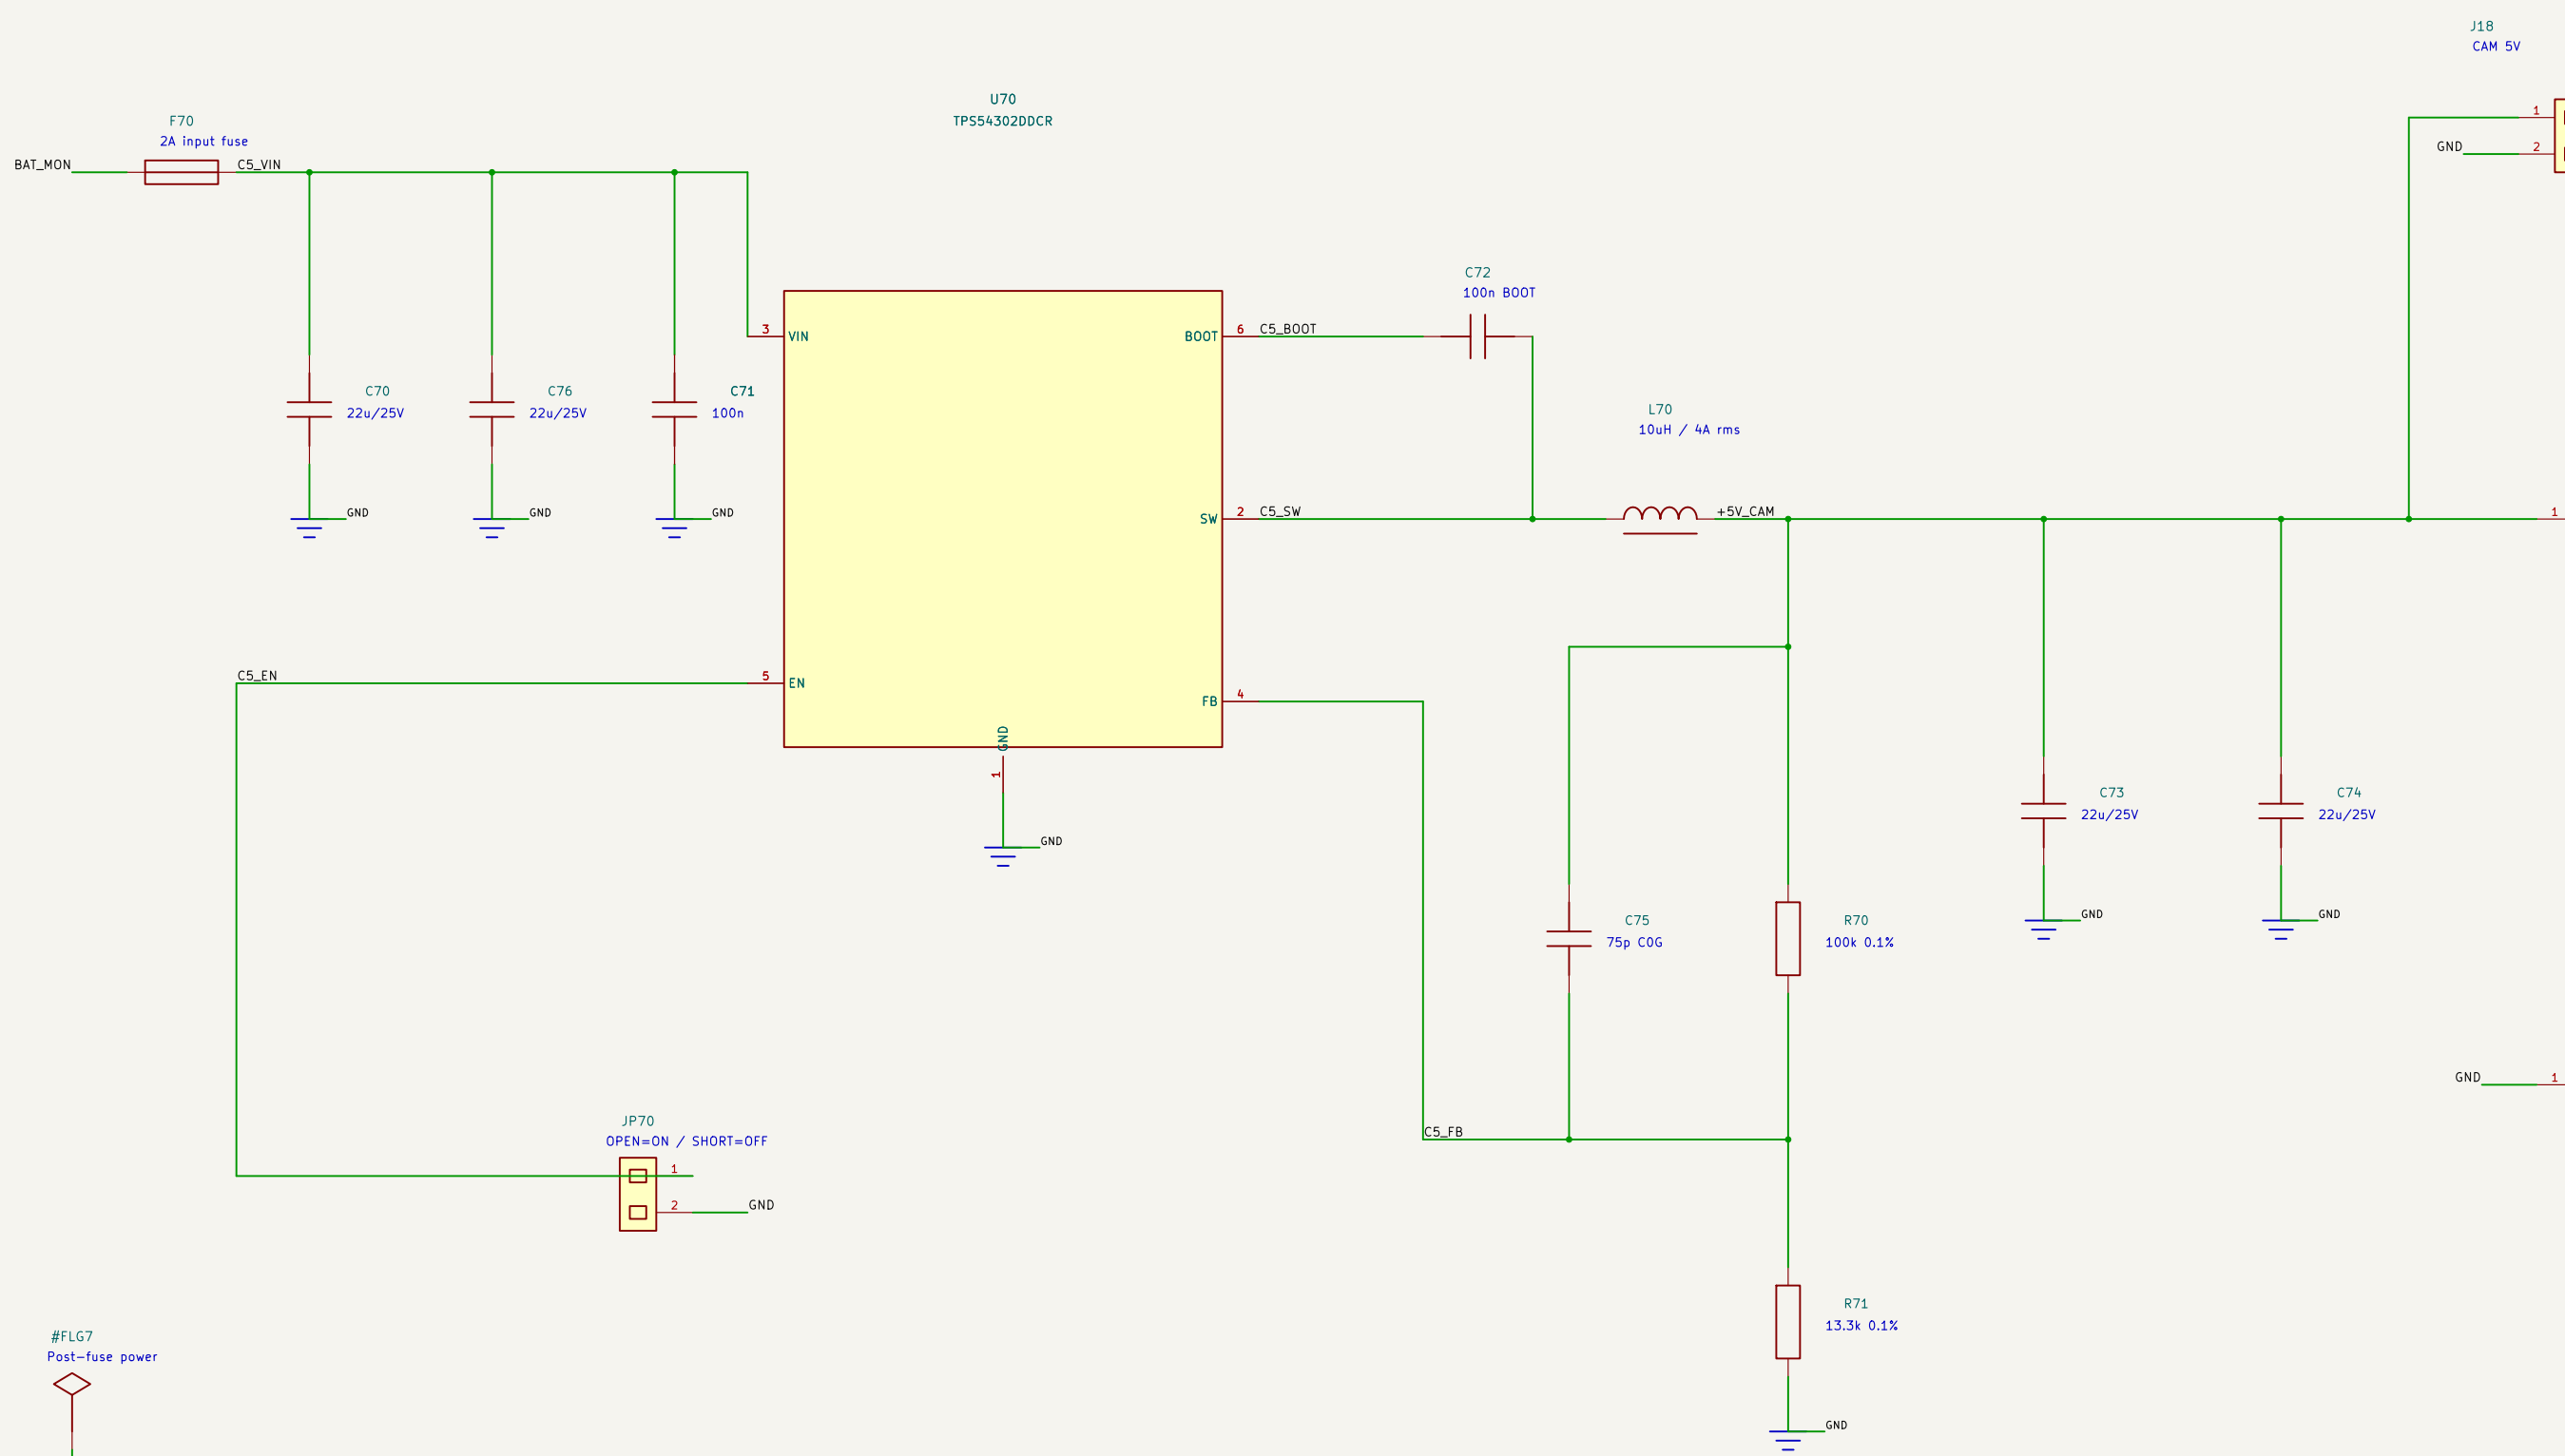

11 Motion 5 V / independent fused buck

80 is internally pulled up when connected to new battery.

Prototype: verify stability, temperature, cable drop and concurrent load, for PCB placement frozen.

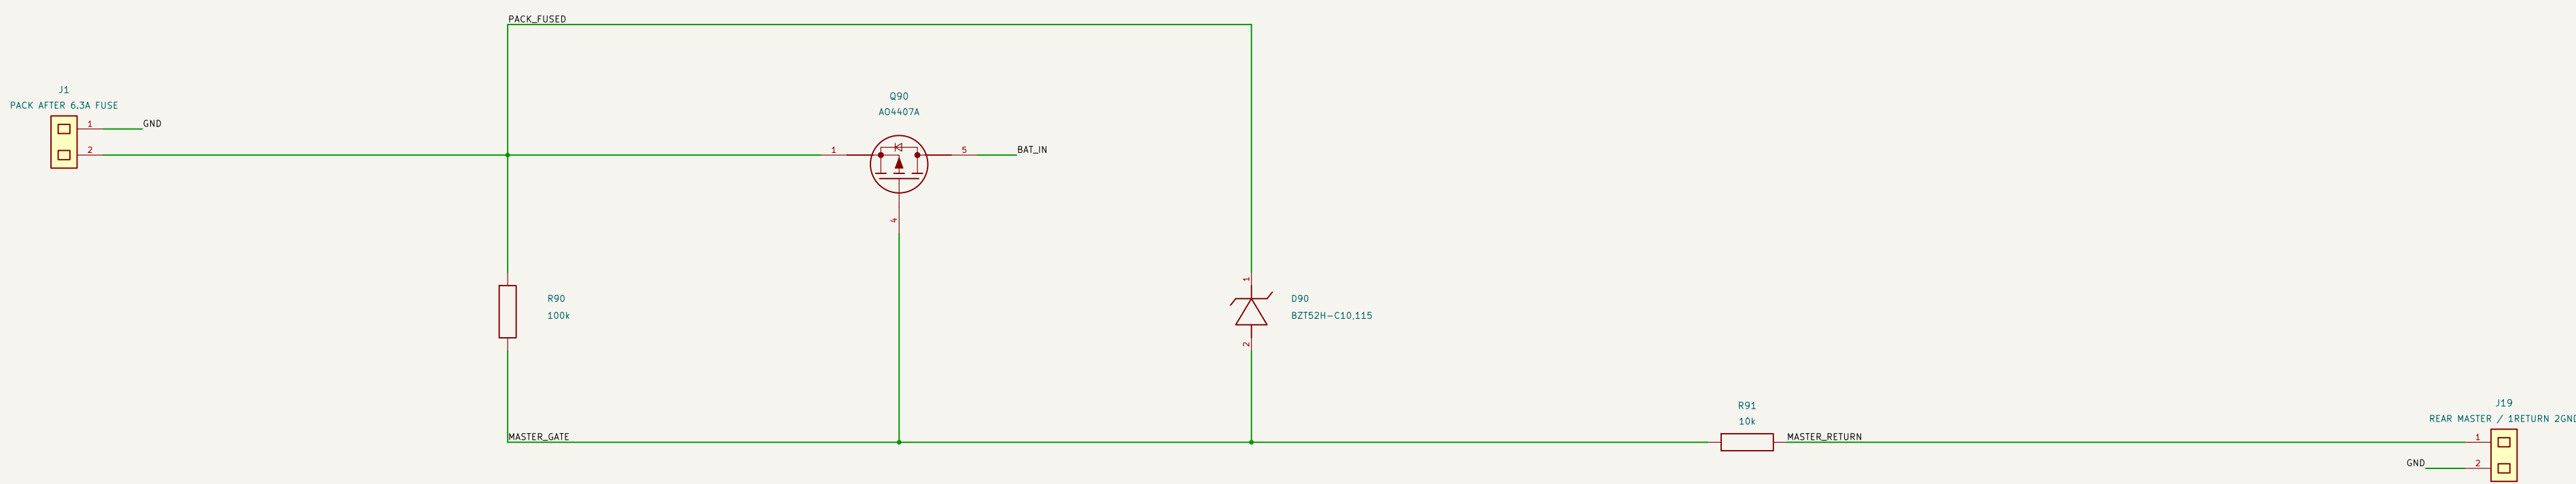

12 Interaction 5 V / independent fused buck

80 is internally pulled up when connected to new battery.

Prototype: verify stability, temperature, cable drop and concurrent load, for PCB placement frozen.

13 Physical master power / low-current rear switch

OFF opens Q05 and the separate motion latch loop. An automatic ARM. Locking Q1 retains reverse-polarity protection.

Q05 50-mA peak loss / inrush SDA / DF leakage / thermal: NOT_TESTED.

Rear switch only sinks gate current. Do not connect a motor here.

Q06 second gate connects motion J6, LOOK_A3 to CLK_A.

PROTOTYPE / NOT TESTED - circuit and pin assignments retained.
